PROJECTS

MOBILE DEVICE TRACKER| Python, HTML, CSS, JS **10 2024**

- Mobile Device Tracker provides real-time tracking and monitoring of mobile devices. It uses GPS, Wi-Fi, and cellular networks to ensure accurate and secure positioning.
- The system offers live tracking, geofencing, and location history logs. It enhances security through remote management for lost or stolen devices.

Online Shopping Portal | SQL, PHP, Java Script **12 2023**

- This web-based shopping system is developed for an existing shop, providing customers with an online shopping experience accessible through Android devices.
- The project aims to deliver an efficient online shopping application, allowing customers to purchase goods and services in real-time over the internet, enhancing the shop's e-commerce presence.
- Customers can conveniently browse and buy products anytime and anywhere using their Android devices, with the added benefit of home delivery from their favorite shop.

Photo Gallery| HTML,CSS,JS **09 2023**

- The photo gallery website is a digital platform where users can upload, organize, and showcase their personal or professional photo collections in an easy-to-navigate interface.
- It offers features such as albums, customizable galleries, image search, and sharing options, ensuring a seamless experience for users to display and manage their photos online .
