bhoomikavarshney1@gmail.com linkedin.com/in/bhoomikavarshney

Skills

Programming Languages: C/C++, Java, Python, React.js, C#, PHP, JavaScript, HTML, CSS.
Databases: MySQL, Oracle DB, Elastic Search.
Frameworks & Libraries: Node.js, LangChain, LangGraph.
Software tools/Platforms: RESTful API, Apache, OpenAI, HuggingFace, Linux, Firebase.

Work Experience

Intern Jan 2024 - May 2024
Appolo Computers Pvt Ltd. ***New Delhi, IN-DL***

- Implemented and optimized Natural Language Processing (NLP) models, enhancing the text classification pipeline for processing large datasets, with an accuracy improvement of 15%.
- Integrated Elasticsearch for efficient, real-time search capabilities, reducing search query latency by 30%, leading to a significant performance boost in the web application.
- Worked on small and large language models (LLMs), specifically fine-tuning pre-trained models for sentiment analysis and document summarization, increasing prediction accuracy by 20%.
- Used Hugging Face Transformers, TensorFlow, and PyTorch for model development and deployment, ensuring high-quality, scalable solutions for production environments.
- Integrated Retrieval-Augmented Generation (RAG) to make NLP models more accurate and context-aware, improving response quality and knowledge retrieval.

Education

Master of Computer Applications July 2022 - June 2024
Banasthali Vidyapith, *Tonk, IN-RJ*
Bachelor of Computer Applications July 2019 - May 2022
Dr. Bhimrao Ambedkar University, *Agra, IN-UP*

Projects

Hotel Booking Management System | (In-House Project, *Banasthali Vidyapith, Tonk, IN-RJ*)
IDE **- VS Code.**
Tech Stack: **HTML, CSS, React.js & JavaScript.**

- Built a full-stack Hotel Management System to streamline bookings, check-ins, room availability, and payment functionalities using JavaScript.
- Designed a fast, responsive UI with React.js, incorporating React hooks and effective state management for optimized performance and to reduce load times.
- Improved overall user experience through intuitive design and accessibility for both hotel staff and guests.

BudgetBee
Tech Stack: **Java, XML, Firebase (Realtime Database and Authentication), MPAndroidChart (for data visualization) & CSV export libraries.**

- Designed and developed BudgetBee, an Android-based expense tracking app using Java and Firebase, allowing users to seamlessly log, categorize, and analyze their monthly spending with real-time data syncing.
- Implemented key features such as interactive pie charts for category-wise analysis, goal-setting modules, and CSV export, enhancing user engagement and financial visibility.
- Followed a modular, scalable architecture with clean CRUD-based design, incorporating Firebase for cloud-based storage.
